Signature names: mouse hepatitis virus (MHV) receptor glycoprotein

NyAltary glycoprotein F - mouse hepatitis virus (MHV) receptor glycoprotein

C;Species: Mus musculus (house mouse)

C;Date: 20-Feb-1995 #sequence revision 20-Feb-1995 #text_change 09-Jul-2004

C;Date: 20-Feb-1995 #sequence revision 20-Feb-1995 #text_change 09-Jul-2004

S;Accession: SJA338; Julsone novel, M.; Novel, G.

Submitted to the EMBL Data Library, July 1992

A;Abscription: A Clp-family gene present on the lactose-protease plasmid of lactococcus

A;Accession: S34338
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Cross-references: UNIPROT:Q61352; EMBL:X67281; NID:g312585; PIDN:CAA47698.1; PID:g3125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                      1962

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
Sequence 6, Application US/08466465

Patent No. 6162432

GENERAL INFORMATION:
APPLICANT: Wallner, Barbara P.
APPLICANT: Cooper, Kevin D.
TITLE OF INVENTION: Method of Prophylaxis or Treatment of Antigen
TITLE OF INVENTION: Presenting Cell Driven Skin Conditions Using
TITLE OF INVENTION: Inhibitors of the CD2/LFA-3 Interaction
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD
STREET: 60 State Street, Suite 510
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 351;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OPERATING SYSTEM: PC-DOS/NS-DOS

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 4, A Sequence 7, A Sequence 22, Sequence 20,

New isolated polypeptides and polynuclectides useful in diagnostics, forensics, in preventing or treating diseases such as HIV and cancer, and as drug targets.

Claim 10; SEQ ID NO 12; 205pp; English.

The invention relates to novel isolated polymucleotides and polypeptides encoded by them. Also included are mutants or variants of the polymucleotides and polypeptides. A polypeptide of the invention has virucide, anti-HIV, cytostatic, antiinflammatory, antiallergic, immunosuppressive, antiarteriosclerotic, hypotensive, osteopathic, antianaemic, neuroprotective, nootropic, antiparkinsonian, antiasthmatic, haemostatic, and cardiant activity. The composition and

```
ö
methods are useful in diagnostics, forensics, gene or chromosome mapping, identification of mutations responsible for genetic disorders or other traits, in assessing biodiversity, or in producing many other types of data and products dependent on DNA and amino acid sequences. They may also be used in preventing or treating diseases (e.g. HIV and other viral infections, cancer, inflammation, allergies, graft rejection, attheroselerosis, hypertension, osteoporosis, anemia, Albreimer's disease, Parkinson's disease, asthma, diabetes, myocardial infarction or haemophilia). They may also be used as targets in drug screening. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                            The present invention provides the protein and coding sequences of a novel human immunoglobulin domain-containing cell surface recognition molecule known as INSP05. The polypeptide is useful as immunoglobulin domain-containing cell surface recognition molecule. The sequences may also be used in therapy or diagnosing a disease or in the manufacture of a medicament for treating a disease. The disease or in the manufacture of autoimmune/inflammatory, cardiovascular, neurological, psychiatric, developmental, genetic or metabolic disorder, an infection or other pathological condition. The polypeptides and nucleic acids are essential to the structural integrity and homeostatic functioning of most tissues. The present sequence is a polypeptide shown in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                      novel human immunoglobulin domain-containing cell surface recognition molecule known as INSP052. The polypeptide is useful as immunoglobulin domain-containing cell surface recognition molecule. The sequences may also be used in therapy or diagnossing a disease or in the manufacture of a medicament for treating a disease. The disease is a cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, psychiatric, developmental, genetic or metabolic disorder, an infection or other pathological condition. The polypeptides and nucleic acids are essential to the structural integrity and homeostatic functioning of most tissues. The present sequence is a polypeptide shown in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DYRDRIRLFENGSLLLSDLQLADEGTYEVEISITDDTFTGEKTINLTVDVPISRPQVLVA 153

The invention relates to novel isolated polynucleotides and polypeptides encoded by them. Also included are mutants or variants of the propertides and polypeptides. A polypeptide of the invention has virucide, anti-HIV, cytostatic, antihiflammatory, antialergic, immunosuppressive, antiarteriosclerotic, hypotensive, osteopathic, antidiabetic, and cardiant activity. The composition and methods are useful in diagnostics, forensics, gene or chromosome mapping, identification of mutations responsible for genetic disorders or other traits, in assessing biodiversity, or in producing many other types of data and products dependent on DNA and amino acid sequences. They may also be used in preventing or treating diseases (e.g. HIV and other viral infections, cancer, inflammation, allergies, graft rejection, atherosclerosis hypertension, osteoporosis, anaemia, Alzheimer's disease, asthma, diabetes, myocardial infarction or haemophilia). They may also be used as targets in drug screening. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polypeptides and polynuclectides useful in diagnostics, forensics, in preventing or treating diseases such as HIV and cancer, and as drug targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   153

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinflammatory, neuroprotective, antianaemic, cyrostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic protein of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of a novel human immunoglobulin domain-containing cell surface recognition molecule known as INSP052. The polypeptide is useful as immunoglobulin domain-containing cell surface recognition molecule. The sequences may also be used in therapy or diagnosing a disease or in the manufacture of a medicament for treating a disease. The disease is a cell proliferative,

The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% to 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morpid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The present sequence is human immunoglobulin superfamily protein (IGSFP)-

4. The IGSFP polypeptide and polynucleotide are useful for diagnosing,

5. The IGSFP polypeptide and polynucleotide are useful for diagnosing,

5. Immune system disorders associated with aberrant expression of

6. IGSFP e.g. immune system disorders (e.g. acquired immune deficiency

8. Syndrome (AIDS), asthma, atherosclerosis, psoriasis, uveitis),

6. neurological disorders (e.g. Alzheimer's disease, Huntington's disease,

6. dementa, Parkinson's disease), Advelopmental disorders (e.g. renal

7. cardiomyopathy, mycarditis), or cell proliferative disorders (e.g.

7. cardiomyopathy, mycarditis), or cell proliferative disorders (e.g.

7. cardiomyopathy, mycarditis, and cancer). The polypeptide and

7. polynucleotide are also useful for assessing the effects of excenous

8. compounds on their expression. The polypeptide is useful in drug

8. screening techniques, to analyse the proteome of a tissue or cell type,

8. selements on a microarray. The polynucleotide is useful for creating

7. knock-in humanised animals or transgenic animals to model human diseases,

8. in somatic or germline gene therapy, to generate a transcript image of a

8. control of the control of the central of the chromosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DYRDRIRLFENGSLLLSDLQLADEGTYEVEISITDDTFTGEKTINLTVDVPISRPQVLVA 120

```
New isolated polypeptides and polynucleotides useful in diagnostics, forensics, in preventing or treating diseases such as HIV and cancer, and as drug targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel isolated polynucleotides and polypeptides encoded by them. Also included are mutants or variants of the polynucleotides and polypeptides. A polypeptide of the invention has virucide, anti-HTV, cytostatic, antiinflammatory, antiallargic, immunosuppressive, antiarteriosclerotic, hypotensive, osteopathic, haemostatic, antidiabetic, and cardiant activity. The composition and methods are useful in diagnostics, forensics, gene or chromosome mapping, identification of mutantions responsible for genetic disorders or other traits, in assessing biodiversity, or in producing many other types of data and products dependent on DNA and amino acid sequences. They may not the composition and antino acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  also be used in preventing or treating diseases (e.g. HIV and other viral infections, cancer, inflammation, allergies, graft rejection, atherosclerosis, hypertenation, osteoporoais, anaemia, Alzheimer, addisease, Parkinson's disease, asthma, diabetes, myocardial infarction or haemophilia). They may also be used as targets in drug screening. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                           immunosuppressive, antiarteriosclerotic, hypotensive, osteopathic, antianaemic, neuroprotective, nootropic, antiparkinsonian, antiasthmatic; haemostatic, antidiabetic; cardiant, HIV, viral infection; cancer, inflammation; allergy, graft rejection, atherosclerosis, hypertension; osteoporoais, anaemia; Alzheimer's disease, Parkinson's disease, asthma; diabetes, myocardial infarction; haemophilia.

The invention relates to novel isolated polynucleotides and polypeptides concoded by them. Also included are mutants or variants of the polynucleotides and polypeptides. A polypeptide of the invention has virucide, anti-HIV, cytostatic, antihiflammatory, antiallergic, immunosuppressive, antiarteriosclerotic, hypotensive, osteopathic, antiandamberic, ancidanceric, ancotropic, antihiflammatory. The composition and methods are useful in diagnostics, forenaics, gene or chromsome mapping, identification of mutations responsible for genetic disorders or other traits, in assessing biodiversity, or in producing many other types of data and products dependent on DNA and anno acid sequences. They may also be used in preventing or treating diseases (e.g. HIV and other viral infections, cancer, inflammation, allergies, graft rejection, atherosclerosis, hypertension, osteoporosis, anaemia, Alzheimer's disease, parkinson's disease, asthma, diabetes, myocardial infarction or haemophila). They may also be used as targets in drug screening. The present sequence represents a polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinflammatory, neuropyctetive, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, heematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic protein of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Y;

                                                                   The present invention relates to novel human transmembrane proteins (TMP) and polynucleotides encoding such proteins. Sequences of the invention are useful for treating diseases or conditions associated with abnormal expression of TMP such as discorders of reproduction (e.g. infertility, prostatitis), developmental (e.g. anaemia, epilepsy), gastrointestinal (e.g. anorexia, Crohn's disease), neurological (e.g. Alzhaimer's disease, stroke), lipid metabolism (e.g. hypercholesterolaemia, hyperlipidaemia), cardiovascular (e.g. atherosclerosis, hypertension), cell proliferative (e.g. cancer, psoriasis) and autoimmune disorders (e.g. acquired immune deficiency syndrome (AIDS), gout, Grave's disease). They are useful for creating knockout humanised animals or transgenic animals to model human disease. Sequences of the invention are also used in gene therapy. The present sequence is TMP-7 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MILSPDQKVLTITRVLMEDDDLYSCMVENPISQGRSLPVKITVYRRSSLYIILSTGGIFL

The present invention provides the protein and coding sequences of a novel human immunoglobulin domain-containing cell surface recognition molecule known as INSPOS2. The polypeptide is useful as immunoglobulin domain-containing cell surface recognition molecule. The sequences may also be used in therapy or diagnosing a disease or in the manufacture of a medicament for treating a disease. The disease is a cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, psychiatric, pathological condition. The polypeptides and nucleic acids are essential to the structural integrity and homeostatic functioning of most tissues. The present sequence is a polypeptide shown in the invention
New INSP052 polypeptides and nucleic acids, useful in diagnosing and treating cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, psychiatric, developmental, genetic or metabolic disorder.
                                                                                                                   Claim 1; Fig 7; Opp; English.

The present invention describes an isolated polynucleotide (I): (a)

Comprising a mucleotide sequence selected from SEQ ID NO:1-244; or (b)

which encodes a polypeptide with biological activity, where the
polynucleotide hybridises to (I) under stringent hybridisation conditions

Cor has greater than 9% sequence identity with (I): (I) has respiratory,
cytostatic, antiathritic, antiinflammatory gastrointestinal,
antibacterial, imminosuppressive, antidiabetic and antirheumatic
cutivities, and can be used in gene therapy. (I) can be used for
generating polynucleotides encoding chimeric or fusion proteins and
tetrivities, and can be used in gene therapy. (I) can be used for
generating polynucleotides can be used to express recombinant protein for analysis, characterisation or therapeutic
conserved for tissues in which the corresponding protein is
preferentially expressed; as molecular weight markers on gels; as
chromosome markers or tags to identify chromosomes or to map related gene
conserved by sequences; as a source of information to derive PCR
conserved by sequences; as a source of information to derive PCR
primers for genetic fingerprinting; as a probe to subtract-out known
sequences in the process of discovering other novel polynucleotides; for
cellenting and making olgomers for attachment to a gene chip or other
support, including for examination of expression patterns; to raise anticonformation antibodies or elicit another immune response. The
polynucleotides and polypeptides can also be used as an antigen
cor raise anti-DNA antibodies or elicit another immune response. The
polynucleotides and polypeptides can also be used treat cancer. The
compositions are useful for promoting better or faster closure of nonhealing wounds, for the generation and regeneration of tissues, for gue

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 DYRDRIRLFENGSLLLSDLQLADEGTYEVEISITDDTFTGEKTINLTVDVPISRPQVLVA 120

New isolated polypeptides and polynucleotides useful in diagnostics, forensics, in preventing or treating diseases such as HIV and cancer, and as drug targets.

Claim 10; SEQ ID NO 7; 205pp; English.

The invention relates to novel isolated polynucleotides and polypeptides encoded by them. Also included are mutants or variants of the polynucleotides and polypeptides. A polypeptide of the invention has virucide, anti-HIV, cytostatic, antiinflammatory, antiallergic, immunosuppressive, antiatreriosclerotic, antiparkinsonian, antiasthmatic, antianaemic, neuroprotective, nootropic, antiparkinsonian, antiasthmatic, haemostatic, antidiabetic, and cardiant activity. The composition and

ö
             identification of mutations responsible for genetic disorders or other traits, in assessing biodiversity, or in producing many other types of data and products dependent on DNA and amino acid sequences. They may also be used in preventing or treating diseases (e.g. HIV and other viral infections, cancer, inflammation, allergies, graft rejection, atheroselerosis, hypertension, osteoporosis, anaemia, Alzheimer's disease, Parkinson's disease, asthma, diabetes, myocardial infarction or haemophilia). They may also be used as targets in drug screening. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                            DYRDRIRLFENGSLLLSDLQLADEGTYEVEISITDDTFTGEKTINLTVDVPISRPQVLVA 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    immunosuppressive, antiarteriosclerotic; hypotensive; osteopathic; antianaemic; neuroprotective; nootropic; antiparkinsonian; antiasthmatic; haemostatic; antidiabetic; cardiant; HIV; viral infection; cancer; inflammation; allergy; graft rejection; atherosclerosis; hypertension; osteoporosis; anaemia; Alzheimer's disease; Parkinson's disease; asthma; diabetes; myocardial infarction; haemophilia.
                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                   94 DYRDRIRLFENGSLLLSDLQLADEGTYEVEISITDDTFTGEKTINLTVDVPISRPQVLVA 153
                                                                                                                                                                                                                                                                                                                                                                                                                              154 STTVLELSEAFTLNCSHENGTKPSYTWLKDGKPLLNDSRWLLSPDQKVLTITRVLMEDDD 213
molecule known as INSP052. The polypeptide is useful as immunoglobulin domain-containing cell surface recognition molecule. The sequences may also be used in therapy or diagnosing a disease or in the manufacture of a medicament for treating a disease. The disease is a cell proliferative, autoimmune/inflammatory, cardiovascular, neurological, psychiatric, developmental, genetic or metabolic disorder, an infection or other pathological condition. The polypeptides and mucleic acids are essential to the structural integrity and homeostatic functioning of most tissues. The present sequence is a polypeptide shown in the invention
                                                                                                                                                                                                                                                                                                                                                                                                             STTVLELSEAFTLNCSHENGTKPSYTWLKDGKPLLNDSRMLLSPDQKVLTITRVLMEDDD 180
                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                    The invention relates to novel isolated polynucleotides and polypeptides encoded by them. Also included are mutants or variants of the encoded by them. Also included are mutants or variants of the polynucleotides and polypeptides. A polypeptide of the invention has virucide, anti-HIV, cytostatic, antinifamatory, antialaergic, immunosuppressive, antiarteriosclerotic, hypotensive, osteopathic, antianaemic, neuroprotective, nootropic, antiparkinsonian, antiasthmatic, hemostatic, antidabetic, and cardiant activity. The composition and methods are useful in diagnostics, forensics, gene or chromosome mapping, identification of mutations responsible for genetic disorders or other traits, in assessing biodiversity, or in producing many other types of data and products dependent on DNA and amino acid sequences. They may also be used in preventing or treating diseases (e.g. HIV and other viral infections, cancer, inflammation, allergies, graft rejection, athericans cancer, inflammation, allergies, ansemia, Alzheimer's disease, parkinson's disease, asthma, diabetes, myocardial infarction or hemophilia). They may also be used as targets in drug screening. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                             The invention relates to a novel isolated polynucleotide and the encoded dolypeptide. The molecules of the invention demonstrate antiinflammatory, neuroprotective, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating
                                                                                                                                                                                                                                                                                                                              inflammatory, haematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic protein of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DYRDRIRLFENGSLLLSDLQLADEGTYEVEISITDDTFTGEKTINLTVDVPISRPQVLVA 153
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STTVLELSEAFTLNCSHENGTKPSYTWLKDGKPLLNDSRMLLSPDQKVLTITKVLMEDDD 213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                93

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein
```

Human mature protein SEQ ID NO:12.

(first entry)

15-JUL-2004

ADO47895;

```
The present sequence is human immunoglobulin superfamily protein (IGSFP)-

1. The IGSFP polypeptide and polynucleotide are useful for diagnosing, treating or preventing disorders associated with aberrant expression of IGSFP e.g. immune system disorders (e.g. acquired immune deficiency syndrome (AIDS), asthma, atherosolerosis, psoriasis, uvetiss, neurological disorders (e.g. Alzheimer's disease, Huntington's disease, dementia, Parkinson's disease), developmental disorders (e.g. renal tubular acidosis, epilepsy, anaemia), muscle disorders (e.g. renal tubular acidosis, cirrhosis, or cell proliferative disorders (e.g. artanosolerosis, cirrhosis, hepatitis, and cancer). The polypeptide and polynucleotide are also useful for assessing the effects of exogenous compounds on their expression. The polypeptide is useful in drug screening techniques, to analyse the proteome of a tissue or cell type, as elements on a microarray. The polynucleotide is useful for creating knock in humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the chromosomal content of the polynery and animals of the chromosomal content of the chromosomal content of the chromosomal content of the chromosomal content of the chromosomal content of the chromosomal content of the chromosomal content of the chromosomal contents and contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents of the chromosomal contents content
